ULTRA SERIES

TRIP CUTTING EDGE DESIGN

The SnowWolf Ultra features a trip cutting edge design which allows full down pressure for increased scraping ability in forward or backdragging situations. It eliminates “false tripping” from snow load and will only engage if you actually strike an immovable object.

OSCILLATION

Because your Skid Loader has no suspension, the SnowWolf Ultra has 6” of lateral movement capability built in to follow the contours of your plowing surface.

MASSIVE CONSTRUCTION

The SnowWolf Ultra is designed to take abuse from the largest Skid Loaders. At approximately 100 pounds per foot of plowing width, you know the Ultra means business

PLOWING EFFICIENCY

The SnowWolf Ultra has a very tightly rolled moldboard and angles a full 32.5 degrees to maximize efficiency and minimize fuel and horsepower requirements. The baked on powder coat paint rolls snow effortlessly and the Ultra design allows you to stack snow to amazing heights.

PRO SERIES

FULL TRIP DESIGN

This feature of the SnowWolf protects the machine and operator if an obstacle is struck. Coil type springs gives it a much softer trip action which eliminates damage.

POWER EFFICIENCY

The SnowWolf Pro is designed with a tightly rolled moldboard and angles to a full 31 degrees to roll the snow, not bulldoze it. It maximizes productivity and minimizes fuel and horsepower requirements.

SEMI-FLOATING DESIGN

This innovative feature, exclusive to the SnowWolf Pro Series, allows the operator to apply approximately 250 lbs of down pressure on the go whenever it is needed.

STRENGTH WITHOUT EXCESS WEIGHT

The high strength, low weight design of the SnowWolf Pro allows it to be used on your compact tractor or a small to medium skid-steer loader without damaging your machine.

ULTRA SNOW PUSHER

TRIP CUTTING EDGE:

We all hit things, even with the best of intentions! Now you know your operators and your machine are protected...with the tried and proven SnowWolf trip edge design.

OSCILLATION:

Cleans to the pavement, even in un-level terrain. You know how important this is with a rigid frame skid steer!

SNOW PILING ABILITY:

Our design extends the pusher about 3' in front of the machine which allows you to stack the snow much higher than a conventional snow pusher.

BOLT ON SIDEPLATES AND BRACES:

This allows much easier shipping and less freight costs, plus, can be replaced if damaged!

SNOW TIRES FOR SKID-STEERS

These snow tires will increase your traction on snow and ice. The difference in traction compared to your skid-steer tires is like day and night

Available with or without studs and with a 6 or 8 bolt pattern.
